Technical Insulation

K-Roc Pipe Insulation

Mineral Fibre Insulation for HVAC Applications

K-Roc Pipe Insulation

Introduction

Kingspan K-Roc® Pipe Insulation is made of mineral wool with a reinforced aluminium foil facing. K-Roc® Pipe Insulation has a declared maximum service temperature of 140°C and its longitudinal fibre arrangement provides both rigidity and good thermal insulation properties.

K-Roc[®] Pipe Insulation sections are supplied with a wide, self-adhesive lap.

Application

K-Roc® Pipe Insulation can be used for thermal and anticondensation insulation of pipework systems in HVAC and building services applications.

The use of a reinforced aluminum foil finished with a wide self-adhesive closing lap makes the assembly process both quick and secure.

K-Roc® Pipe Insulation sections are 1.2 metres long which can increase assembly efficiency and contribute to lower labour costs.

Product Advantages

K-Roc® Pipe Insulation has an innovative system of maintaining the round shape of its internal diameter. Due to the technology used to shape the walls of the pipe section, K-Roc[®] Pipe Insulation will be tightly closed when installed around the pipe. This feature can help to counteract the occurrence of cold bridges.

Self-adhesive lap Reinforced aluminium foil Assembly cut K-Roc[®] mineral wool longitudinal fibre arrangement

Thermal Performance

K-Roc® Pipe Insulation achieves a thermal conductivity of 0.033 W/m.K at 10°C. A full list of values can be found in the DoP.

General Physical Properties

Property	Test Method	Typical Value
Nominal density	-	70 kg/m³
Thermal conductivity at +10°C. Please refer to DoP for full values	BE EN ISO 8497: 1997	0.033 W/m·K
Maximum service temperature declared	BS EN 14707: 2012	140°C
W/all thickness to lorge as	DC EN 13447, 2019	OD < 150 mm -5% or -3 mm / +5% or +3 mm
Wall thickness tolerance	D3 EIN 13407: 2010	OD ≥ 150 mm -6% or -5 mm / +6% or +5 mm
	DC ENI 13447, 2019	OD < 150 mm -0 mm / +4 mm
Internal alameter tolerance	D3 EIN 13407: 2010	OD ≥ 150 mm -0 mm / +2% or +5 mm
Length tolerance	BS EN 13467: 2018	+5 mm
Uniformity of thickness	BS EN 13467: 2018	difference < 6 mm or 10%
Squareness	BS EN 13467: 2018	±4 mm or ±2% external diameter
Content of chloride ions	BS EN 13468: 2001	≤ 10 ppm (10 mg / 1 kg)
Diffusion resistance of water vapour	BS EN 13469: 2012	sd ≥ 200 m

Fire Test Classifications

Property	Test Method	Result	Diameter (mm)	Thickness (mm)	
Paratian to fire	BS EN 13501-1: 2018	A2 _L -s1,d0	≤ 300	Any	
Reaction to fire		A2-s1,d0	> 300	Any	

Notes:

BS EN 14707: 2012 (Thermal insulating products for building equipment and industrial installations. Determination of maximum service temperature for preformed pipe insulation). BS EN 13501-1: 2018 (Fire classification of construction products and building elements - Classification using data from reaction to fire tests). BS EN ISO 8497: 1997 (Thermal insulation - Determination of steady-state thermal transmission properties of thermal insulation for circular pipes (ISO 8497:1994)).

BS EN 13467: 2018 (Thermal insulating products for building equipment and industrial installations. Determination of dimensions, squareness and linearity of preformed pipe insulation). BS EN 13468: 2001 (Thermal insulating products for building equipment and industrial installations. Determination of trace quantities of water soluble chloride, fluoride, silicate,

BS EN 13469: 2012 (Thermal insulating products for building equipment and industrial installations. Determination of water vapour transmission properties of preformed pipe insulation).
